Skills

- **Languages:** Python, SQL, JavaScript,
- **Tools:** Jupyter Notebook, Tableau, PowerBI, MySQL
- **Soft Skills:** Leadership, Problem Solving, Team Player, Adaptability

Internship

Unified Mentor – Data Science Intern

Apr 2025 – May 2025

- Performed EDA and visualization on social media, population, and road safety datasets using Python.
- Cleaned and analyzed top Instagram influencer data to uncover audience and engagement trends.
- Explored global population patterns using demographic data to extract regional insights.

Tech Stacks Used: Python, Pandas, Matplotlib, Seaborn, Jupyter Notebook

British Airways - Data Science Job Simulation

Jul 2024 - Aug 2024

- Scraped airline review data end-to-end from Skytrax using Python tools like BeautifulSoup and Selenium.
- Applied NLP techniques for sentiment analysis and topic modeling on customer reviews.
- Visualized key insights to reveal patterns in passenger satisfaction and common feedback themes.

Tech Stacks Used: Jupyter Notebook

Projects

E-Commerce Sales & Customer Behaviour Analytics (SQL)

Nov 2025

- Designed a normalized e-commerce database for customers, orders, products, payments, and inventory.
- Performed analytical SQL queries using joins, CTEs, and window functions.
- Analyzed revenue trends, customer behaviour, best-selling products, and low-stock alerts.
- Delivered actionable insights to support sales, marketing, and inventory decisions.

Tech Stacks Used: MySQL, SQL, MySQL Workbench

Traffic Sign Recognition using CNN (Deep Learning)

Oct 2025

- Built a Convolutional Neural Network (CNN) model to classify 43 traffic sign categories using the GTSRB dataset.
- Performed image preprocessing, augmentation, and model optimization to achieve 97% test accuracy.
- Implemented real-world prediction workflow and Grad-CAM visualizations for model explainability.
- Demonstrated accurate recognition on external images, proving strong generalization and practical applicability.

Tech Stacks Used: Python, TensorFlow/Keras, NumPy, Pandas, OpenCV, Matplotlib

Airline Passenger Churn Prediction

Apr 2025

- Developed a machine learning model to predict airline passenger churn using booking and review data.
- Performed data preprocessing and feature engineering to enhance model performance.
- Applied classification algorithms including Logistic Regression, Random Forest, and XGBoost.
- Outcome: Identified high-risk churn segments, enabling targeted retention strategies and improved customer loyalty.

Tech Stacks Used: Python, Pandas, Matplotlib, Seaborn, Jupyter Notebook, PowerBI

Summer Training

Board Infinity - Micro Learning in Data Science

May 2024 - Jul 2024

- Completed hands-on training in data analysis and visualization with real-world datasets.
- Gained practical experience in Python, SQL, Advanced Excel, and Tableau.
- Worked on guided projects to apply tools and techniques in real-life scenarios.

Tech Stacks Used: Advanced Excel, Tableau, MySQL, Python

Certificates

- IBM Data Science Professional - Coursera
- Google Data Analytics - Coursera
- Generative AI - Ihub Divya Sampark

Nov 2025

Sep 2025

Sep 2024

Education

Lovely Professional University

Aug 2022 - July 2026

BTech CSE With Data Science And Machine Learning; CGPA: 7.1

Phagwara, Punjab

Narayana IIT Academy

Jul 2020 - May 2022

Intermediate with Science; Percentage: 71%

Vijayawada, Andhra Pradesh

Narayana Kennedy High School

Jul 2019 - Apr 2020

Matriculation; Percentage: 78.8%

Vijayawada, Andhra Pradesh
